Slasher® WEEDKILLER DIRECTIONS FOR USE

Do not spray if weeds are wet or rain is expected before the spray dries on the foliage. For best results ensure thorough coverage when spraying weeds. Do not allow spray to contact or drift onto plants you do not want killed. Test spray on porous hard surfaces as discolouration may occur e.g. pavers.

<tr>
<td>Gardens, paths, rockeries, tilled roofs, walls, driveways, around buildings, spot spraying in lawns and turf.</td>
<td>Algae, lichen, liverwort and moss.</td>
<td>70 mL per litre of water.</td>
<td>Spray to completely cover plant surface. For driveways or heavy infestations, clean off by brushing after 3 days and reapply if necessary.</td>
</tr>
</tbody>
</table>

NO WITHHOLDING PERIOD REQUIRED WHEN USED AS DIRECTED.

For more information about Slasher Weedkiller and the rest of the eco-organic garden range visit www.ecoorganicgarden.com.au
**Slasher Weedkiller** is an organic herbicide that rapidly kills weeds, moss, algae and lichen. Use Slasher Weedkiller in garden beds, paths, veggie patches, driveways, around buildings, tiled roofs and even spot spraying in lawns.

**Slasher WEEDKILLER HOW IT WORKS**

Slasher Weedkiller is a non-selective contact herbicide. When sprayed over plants it destroys the outer leaf cells causing plants to desiccate, wilt and die. Slasher Weedkiller is fast acting and requires minimal sunlight or heat to work. Weeds wilt within a few hours and are usually dead by the next day.

Note: desiccation will only occur to the green plant parts that have been sprayed so thorough spray coverage is recommended. Slasher Weedkiller does not penetrate through bark or to underground roots and bulbs.

**Slasher WEEDKILLER WHAT IT’S MADE FROM**

Slasher Weedkiller is made from plant oils (GM-free) which have been converted into a natural acid called nonanoic acid (also known as pelargonic acid). Nonanoic acid can be found in pelargoniums in large quantities and is also produced in other plants when stressed.

**Slasher WEEDKILLER HOW SAFE IS IT?**

Nonanoic acid (the active ingredient in Slasher Weedkiller) occurs naturally in plants and is regularly used in the processing of fruits and added to foods.

In the soil Slasher Weedkiller biodegrades within three days and leaves no lasting residue. There’s also no withholding period so it’s safe to use in the veggie patch.

When using Slasher Weedkiller avoid contact on skin or eyes as this may cause irritation. Once it has dried on the foliage it is safe for people and pets.
